

**EBS delivers e-Business enterprise solutions and related consulting services enabling organizations to meet their business goals through industry-strength IT applications and leverage their existing EIS investment.**

**The solutions we deliver are characterized by the high level of scalability, modularity, extensibility, reliability, and security that is essential to business-critical systems.**

**Our systems are based on a robust, standard, open, and portable architecture.**

**The combination of J2EE powerful technology and our high quality software development ability, allows us to deliver end-to-end solutions that meet customer business requirements in an economical, rapid, and low-risk manner.**

## e-BUSINESS

Organizations rely heavily on their IT systems to support their every day internal operations. They require a robust infrastructure to support core business processes, a mechanism for cooperation with partners and suppliers, and seamless integration with back-ends (ERP, CRM, Legacy, Data Sources).

Moreover, organizations require that their products and services are accessible in a secure, and effective way in order to attract new customers and efficiently serve existing ones.

The competitive advantage of an enabling e-Business solution allows organizations to achieve internal efficiency, and increase their profitability and customer market share.

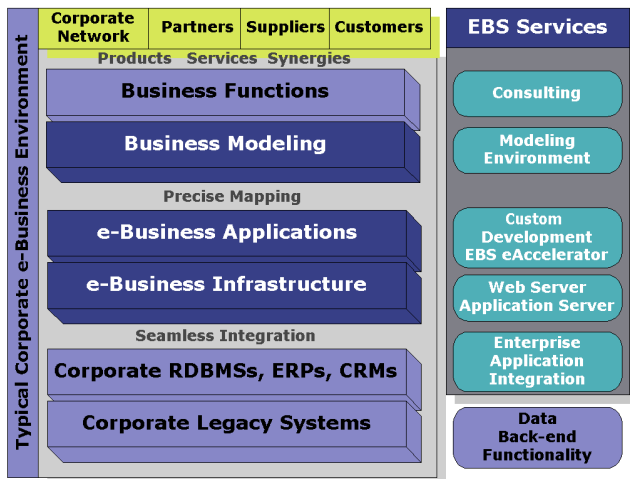

## SOLUTIONS

EBS delivers industry-strength corporate, B2E, B2B, B2C, and B2G solutions using leading edge technologies such as Java (J2EE/J2ME), XML, SAP Business Connector, and the Insevo JCA-based Business Integration Framework.

We offer services for the following industries:

- |               |                   |
|---------------|-------------------|
| →Financial    | →Government       |
| →Telecom      | →Utilities        |
| →Retail       | →Health           |
| →Supply Chain | →Event Management |

*EBS enables companies to deliver new products and services in a rapid and economical manner that meet their business objectives, maximize profit and improve customer service.*

## e-BUSINESS FRAMEWORK

*We use a well-defined application development process and a robust, industry-accepted platform, combined with high expertise, to deliver innovative customer solutions that meet business' core needs and enable enterprises to leverage IT as a source of competitive advantage.*

## PROCESS & METHODOLOGY

EBS pays great attention to gathering user requirements. The information collected using customer interviews in combination with the knowledge and experience of our team, enables us to establish and understand the specific requirements, and then build solutions that precisely satisfy corporate business objectives and can easily adapt to market changes.

We use standard modelling tools and methodologies (UML) for business model generation.

Finally, EBS applies strict Software Engineering processes following an iterative software lifecycle model in the analysis, design, implementation, integration and testing phases.

## CONCLUSION

Whether an organization looks for streamlining internal operations or implementing new ways to promote its products and services, EBS can deliver IT solutions that meet business, time-to-market, and price requirements.

Our solutions are delivered on a flexible and open architecture, while our unique technical knowledge guarantees high quality systems that address core corporate functionality.
